

目录:初一数学(下册) > 第五章 > 相交线与平行线

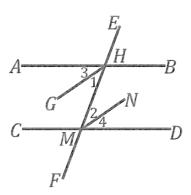

## 如何根据角度关系判定直线平行 (讲义)

**例 1**、已知:如图,CE平分 $\angle ACD$ , $\angle 1 = \angle B$ ,求证: $AB \parallel CE$ 

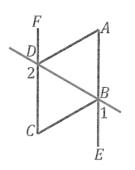

**例 2、** 已知:如图:∠AHF+∠FMD=180°,GH平分∠AHM,MN平分∠DMH,求证:GH∥MN

## 听课笔记

**例 3、**如图, ∠1+∠2 = 180°, ∠DAE = ∠BCF, 求证: AD || BC

**例 4、**已知:如图, $\angle A = \angle ACE, \angle B = \angle BDF$ ,且  $\angle A = \angle B$ ,求证: $EC \parallel DF$
